

VIJAYA BHASKAR REDDY PAMBI

Healthcare Data Analyst

+1 (860) 559-5917 | vijaypambi015@gmail.com | Syracuse, NY

SUMMARY

Healthcare Data Analyst with 3+ years of experience transforming complex clinical, claims, and EHR data into actionable insights that drive quality improvement and operational efficiency. Proficient in SQL, Python, R, Power BI, and Tableau, with hands-on expertise in healthcare standards including ICD-10, CPT, FHIR, and HL7. Experienced in building predictive models, automating ETL pipelines, and delivering executive-level dashboards in compliance with HIPAA/HITECH regulations. Adept at collaborating cross-functionally with clinical, finance, and operations teams to align data solutions with organizational goals.

SKILLS

Healthcare Data Management: EHR/EMR Systems (Epic, Cerner, Meditech, Allscripts, eClinicalWorks), ICD-9/10, CPT, HCPCS, DRG, SNOMED CT, LOINC, FHIR, HL7, Claims & Utilization Data, HIPAA/HITECH Compliance, PHI/PII Protection

Data Analysis & Programming: SQL (T-SQL, PL/SQL, Stored Procedures), Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), R (ggplot2, dplyr, tidyverse), SAS, Excel (Power Query, VBA, Macros), Statistical Analysis, Data Wrangling

Data Visualization: Tableau, Power BI, Google Data Studio, Excel Dashboards, KPI Monitoring, Data Storytelling

Predictive Modeling & Analytics: Regression, Classification, Time Series Forecasting, Risk Stratification, Population Health Management, Resource Planning, Hypothesis Testing, ANOVA, Clustering, PCA

ETL & Data Integration: Talend, Informatica, SSIS, Apache Airflow, Transformation, Data Modeling (Star/Snowflake), Data Warehousing

Cloud & Big Data Platforms: AWS (Redshift, S3, Lambda, Glue, Athena), Azure Synapse, BigQuery, Databricks, Snowflake, Hadoop, Spark

Data Quality: Data Validation, Metadata Management, Master Data Management (MDM), Data Lineage, Frameworks, Data Security

Healthcare Analytics: Value-Based Care, CMS/HEDIS/NCQA Reporting, Financial & Operational Analytics, Revenue Cycle & Claims Denial Analysis, Patient Outcomes & Readmission Metrics

Collaboration/Tools: Agile/Scrum, Jira, Confluence, SharePoint, Git/GitHub, REST, FHIR APIs, CI/CD Concepts, Cross-Functional Collaboration

EXPERIENCE

UCHealth, USA | Healthcare Data Analyst

Jan 2026 – Current

- Analyzing EHR and claims data for 200+ patients using SQL and Excel to identify utilization trends and support clinical reporting initiatives.
- Building and maintaining Power BI and Tableau dashboards to monitor patient flow, scheduling efficiency, and care coordination metrics for clinical leadership.
- Cleaning and standardizing ICD-10 and CPT-coded datasets to ensure data accuracy and consistency across operational and performance reports.
- Collaborating with clinical and operations teams to gather reporting requirements and deliver data views aligned to team needs across 2 departments.
- Supporting documentation and data entry workflows in Epic EHR, contributing to a 10% reduction in charting inconsistencies since onboarding.
- Ensuring full HIPAA/HITECH compliance in all data handling tasks, applying PHI/PII protection protocols to maintain patient data confidentiality.
- Conducting basic trend and variance analysis on patient outcomes data to assist team leads in identifying areas for operational improvement.

Excellus BlueCross BlueShield, USA | Healthcare Data Analyst Intern

Jan 2025 – Dec 2025

- Cleaned, validated, and standardized healthcare claims and member datasets of 500K+ records using SQL and Excel, improving data accuracy by 20% for downstream reporting.
- Developed and maintained 5+ interactive dashboards in Power BI and Excel to track operational KPIs, claims trends, and member utilization metrics across business units.
- Presented dashboard findings and insights to senior leadership across 3 departments, enabling faster and more consistent data-driven decisions.
- Collaborated with clinical, operations, and finance teams to align on 10+ reporting requirements and deliver consistent data views across departments.
- Automated recurring reporting workflows using Excel (PivotTables, Power Query, VBA macros), reducing manual reporting effort by 40% and cutting turnaround time from 2 days to 4 hours.
- Wrote and optimized SQL queries to extract and analyze claims and enrollment data, supporting 10+ ad-hoc and scheduled reporting requests per month.
- Supported data quality initiatives by resolving inconsistencies in ICD-10 and CPT-coded datasets, reducing coding errors by 15% across reporting pipelines.
- Ensured strict HIPAA/HITECH compliance in all data handling activities, applying PHI/PII protection protocols across all reporting workflows.

Accenture, India | Data Analyst

Jan 2022 – Dec 2023

- Extracted, cleaned, and transformed datasets using SQL and Python (Pandas, NumPy) across 1M+ records, improving data accuracy by 25% for business reporting.
- Built and maintained Tableau and Power BI dashboards to track 10+ business KPIs and operational performance metrics, reducing manual reporting time by 35%.

- Automated recurring reports using Excel (PivotTables, Power Query, VBA macros), cutting turnaround time on weekly and monthly reports by 50%.
- Wrote and optimized SQL queries and stored procedures supporting 15+ ad hoc and scheduled reporting requests per month across relational databases.
- Collaborated with business and operations teams to gather requirements and deliver 8+ dashboards aligned to stakeholder needs across 3 departments.
- Conducted statistical and variance analysis to identify trends and performance gaps, supporting 3 key process improvement decisions.
- Supported ETL workflows in Talend and SQL Server, reducing data pipeline refresh time by 30% and improving reporting reliability.
- Applied data validation checks to flag and resolve inconsistencies in source data, reducing reporting errors by 20% quarter over quarter.

EDUCATION

Master in Health Informatics | State University of New York at Oswego

Bachelor of Agriculture | Lovely Professional University, Punjab, India

PROJECTS

FHIR-Based Patient Risk Stratification System | Python, SQL

- Built a Python pipeline to parse FHIR JSON healthcare records and integrate EMR data into a centralized SQL database.
- Developed a patient risk stratification algorithm to identify individuals with chronic conditions for targeted care management.
- Standardized patient datasets to improve data integrity and interoperability across healthcare systems.

Healthcare Readmission Prediction Model | Python, Machine Learning

- Developed a logistic regression model achieving 85% accuracy in predicting hospital readmissions.
- Analyzed patient factors including length of stay, comorbidities, and prior admissions to identify key risk drivers.
- Visualized model results to support providers in identifying high-risk patients and reducing readmission penalties.

EHR Readmission Dashboard | Tableau

- Developed a Tableau dashboard analyzing 10,000+ patient records, enabling proactive identification of high-risk patients.

CERTIFICATIONS

- Google Data Analytics Professional Certificate
- Python Certification
- SQL Certification
- Health Information Privacy and Security (CITI)
- Responsible Conduct of Research (CITI)
