PROFESSIONAL SUMMARY

Results-oriented Data Analyst with a Master's in Bio Health Informatics and 2+ years of experience in healthcare and agricultural analytics. Expert in designing advanced Power BI data models, optimizing SQL queries for large datasets, and automating ETL workflows using Python. Proven track record of reducing reporting latency by 30% at Excellus BCBS. Combining domain knowledge in major EHR systems (Epic, Cerner) and healthcare standards (HIPAA, ICD-10) to drive operational efficiency.

TECHNICAL SKILLS

Data Visualization: Power BI (DAX, Power Query, Dataflows), Tableau, Excel (Advanced Macros, VBA), Looker

EHR/EMR Systems: Epic Systems (Clarity/Caboodle), Cerner, Meditech, Allscripts, eClinicalWorks

Healthcare Standards: HL7 v2/v3, FHIR Resources, ICD-10-CM, CPT, HCPCS, SNOMED CT, HIPAA

Database & Cloud: SQL Server, PostgreSQL, Snowflake, AWS (S3, Glue, Redshift), Azure Data Factory

Programming & Stats: Python (Pandas, NumPy, Scikit-learn), R, A/B Testing, Statistical Modeling

EDUCATION

State University of New York at Oswego

Master of Science, Bio Health Informatics

Lovely Professional University

Bachelor of Science (Hons.), Agriculture

Oswego, NY

Jan 2024 – Dec 2025

Punjab, India

Aug 2019 – Sep 2023

PROFESSIONAL EXPERIENCE

Excellus BlueCross BlueShield

Data Analyst Intern

Rochester/Syracuse, NY

Jan 2025 – Present

- Architected the **"Claims Productivity Dashboard"** in Power BI, engineering complex **DAX** measures (CALCULATE, TIME INTELLIGENCE) to visualize daily throughput, reducing manual reporting latency by **30%**.
- Optimized backend data retrieval by writing efficient **SQL** stored procedures and CTEs to aggregate millions of claims records, improving query execution time by **40%**.
- Implemented a Star Schema data model in Power BI, integrating data from multiple sources (SQL Server, Excel flat files) to ensure accurate cross-filtering for "Claims vs. Utilization" reports.
- Automated data validation workflows using **Python (Pandas)** scripts to identify discrepancies in provider ID and member eligibility before data ingestion, decreasing error rates by **15%**.
- Collaborated with IT and Operations teams to translate business requirements into technical specifications for the migration of legacy reports into the modern BI stack.

Vasista Crop Science

Data Analyst (Promoted from Intern)

Telangana, India

Oct 2022 – Dec 2023

- Engineered **Python** ETL scripts to scrape, clean, and standardize unstructured crop yield data, establishing a centralized SQL database that improved data retrieval speed by **25%**.
- Developed interactive sales dashboards in **Power BI** to track regional distribution performance, enabling leadership to identify and rectify supply chain bottlenecks in real-time.
- Conducted statistical trend analysis on crop health data using **SQL** and Excel, providing actionable insights that optimized inventory planning for the subsequent planting season.

SMS Technologies Private Limited

Data Analyst Intern

Telangana, India

Jan 2022 – Aug 2022

- Executed **SQL** queries to extract and transform customer data from legacy systems, ensuring 100% data integrity during a major system migration project.
- Built dynamic pivot tables and charts in **Excel** to visualize customer churn patterns, presenting findings to senior management to support retention strategies.
- Cleaned and pre-processed raw datasets using **Python**, removing duplicates and null values to prepare data for downstream machine learning analysis.

KEY ACADEMIC PROJECTS

FHIR-Based Patient Risk Stratification System | *Python, SQL, HL7*

- Developed an interoperability pipeline using **Python** to parse FHIR resources (JSON) and aggregate patient records from disparate EMR sources into a centralized SQL database.
- Designed a risk stratification algorithm to classify patients with chronic conditions (e.g., Diabetes) as "High Risk," facilitating targeted care management interventions.

Healthcare Readmission Prediction Model | *Python, Scikit-Learn*

- Developed a predictive model using Logistic Regression to identify high-risk patients, achieving **85% accuracy** in predicting hospital readmissions within 30 days.
- Performed feature engineering on patient demographic and clinical data to isolate key drivers of readmission utilizing **chi-square** feature selection tests.
